MVP of Video Game Sales

The Goel of MVP make suer the data is cline and display without error.

In the first I import the library pandas to read the dataset, matplotlib to visualize data, and nd re to clean the text after that I read the data , Show first five data frame.

Explore the data :

The column, "Rank" is just an index so it can be safely discarded.
The remaining are :
1) Name
2) Year
3) Genre
4) Publisher
5) North America Sales
6) European Union Sales
7) Japanese Sales
8) Other Sales
9) Total Global Sales

I check the null values and the total number of published by Video Games First Party

The Dataset:
